Sorry to be a little late in this.

I looked your course descriptions over. I don't see any problems. I'm attaching a mapping from your courses to PSU.

Your CS182 is somewhat ambiguous on the programming language, so in general it wouldn't transfer as CS162 which is specifically C++. However, successful completion of CS183 *and* CS182 would probably cover both CS162 and CS163 through a by-exception transfer mechanism. The major ramification is that CS182 by itself wouldn't really transfer in as anything (though we'd probably offer a credit by exam to ensure the student had learned C++ by some method.

Warren

Subject: Re: course paperwork

Here's where they stood last. I know I'll need to add a CS160 from scratch and renumber some of these to have a CS162 and a CS260 to meet the ASOT-CS requirements, as well as fix some prereq bugs. But I'm hoping not to have to mess too much with course objectives and whatnot.
